<sup>1</sup> Based on read speed and internal testing. As used for transfer rate, megabyte per second [MB/s] = one million bytes per second. Performance will vary depending on your hardware and software components and configurations.

<sup>2</sup> As used for storage capacity, one gigabyte [GB] = one billion bytes and one terabyte [TB] = one trillion bytes. Total accessible capacity varies depending on operating environment.

<sup>3</sup> IOPS = input/output operations per second. Performance will vary depending on your hardware and software components and configurations.

<sup>4</sup> TBW (terabytes written) values calculated using JEDEC client workload (JESD219) and vary by product capacity.

<sup>5</sup> Operational temperature is measured by an on board temperature sensor. Non-operational storage temperature does not guarantee data retention.

<sup>6</sup> Limited to heatsink model only and Playstation™ 5 system software version 21.02-04.00.00 or higher required.

<sup>7</sup> 5 years or Max Endurance [TBW] limit, whichever occurs first.
