## Far-field module.

You can use your voice to control the TV without the remote controller, using Google Assistant. The far-field module has two microphones and a noise cancellation feature, which means the TV will be able to "hear" you even in loud environments. Simply say "Hey Google", and Google Assistant awaits your commands! This feature is available only in supported languages.

## Outstanding color expression

With this Tesla TV, you get to enjoy QLED technology, which brings stunning color expression and top-quality picture to your home. Simply sit back and relax while watching your favorite shows or movies, made even more spectacular by over a billion shades of color, bright images, amazing contrast, and mesmerizing details!

## Google TV OS

Google TV OS shares some of the best features with Android TV: Chromecast, Bluetooth connection, Google Play Store with access to more than 10.000 apps, Google Assistant, and virtual remote (which allows users to control the TV with their phone). There's also Bluetooth remote controller, as well as the possibility to play games directly on the TV, without the additional game console.

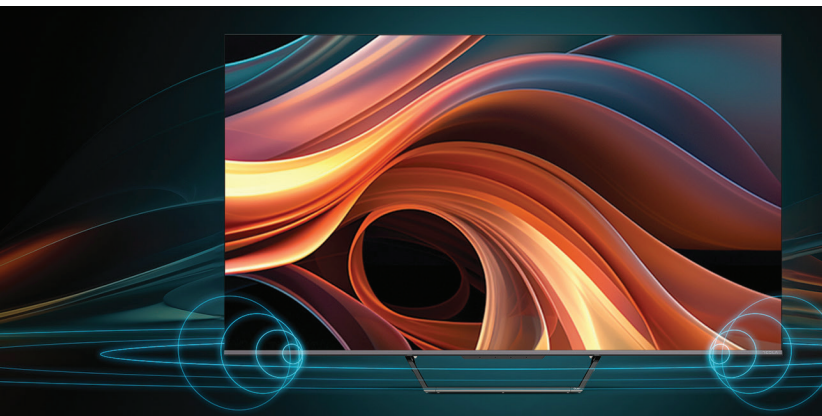

## Beautifully designed

When it comes to design, this Tesla TV stands out thanks to its center stand - a detail we've added to make its appearance even more elegant. The stand is made of aluminum: apart from good looks, it also provides good stability. This model is sleek and frameless, visually quite sophisticated, and it fits beautifully into any modern interior.

## Additional features

There are quite a few additional improvements that come with this Tesla model: for example, a new settings menu, or a new shortcut menu which can be personalized. We have also kept the option of a special button on the remote control, which you can program to open your favorite app, or take you to some other feature.

## Stunning images and sound

Dolby Vision delivers a more vibrant and lifelike viewing experience by providing greater contrast, a wider range of colors, and increased brightness compared to standard video. Dolby Atmos enhances the audio quality of TV content, making it more engaging. Each speaker has a dedicated resonance box, resulting in improved sound reproduction, especially when it comes to lower frequencies.

## GENERAL
